

Impact #3

Commercial exploitation of toxicological testing and services

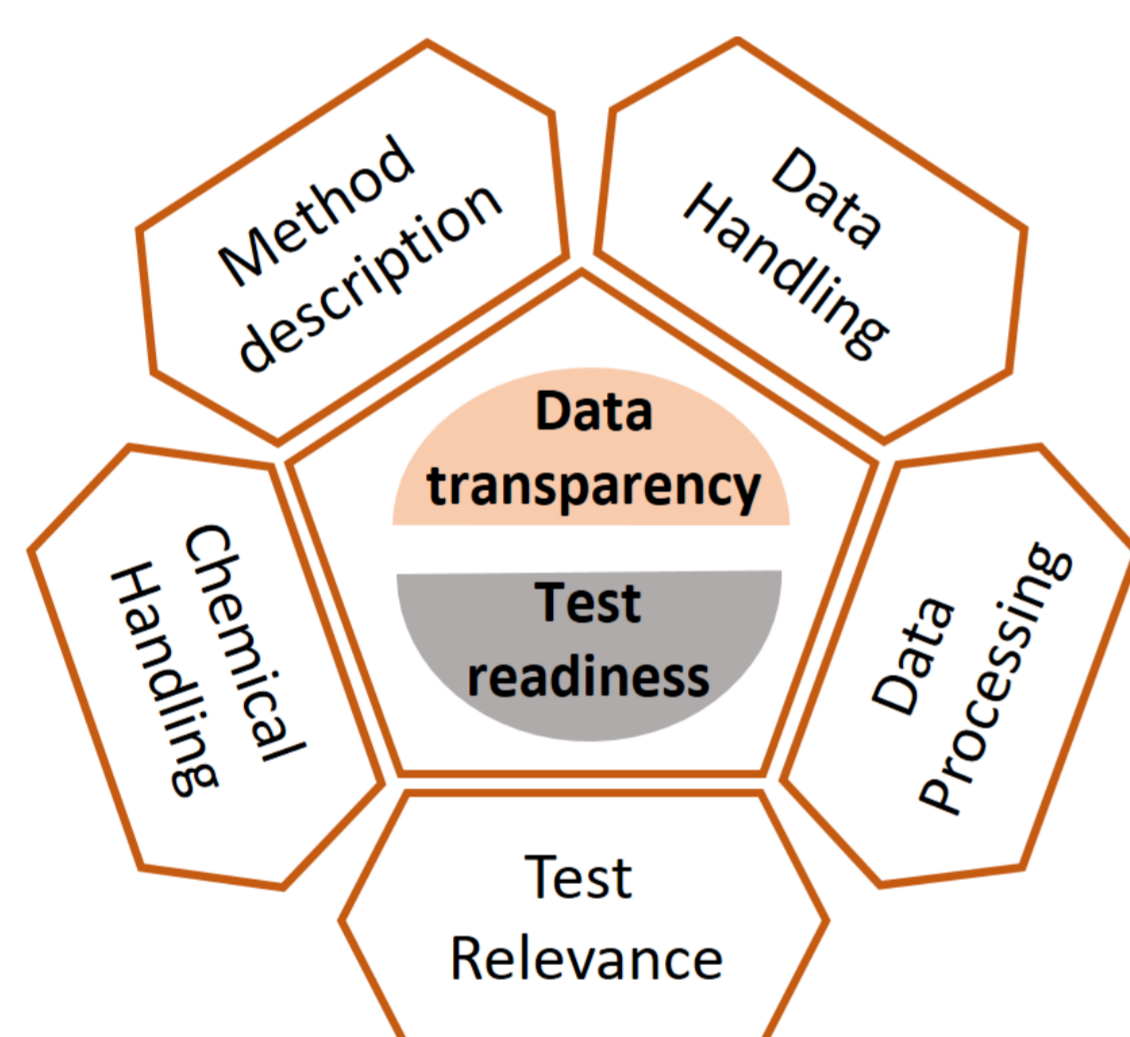

Consolidation of DIFFERENT technologies in ONE platform

The EU-ToxRisk Commercialization Platform aims to translate progress and relationships from the EU-ToxRisk R&D program into services for the market. Many methods developed in research require considerable further investment and development to be offered as a reliable and cost-effective service to customers. Furthermore, many integrated approaches to testing and assessment, or comprehensive risk assessment, require information from a variety of sources to be integrated, including background knowledge, in silico models and in vitro data.

The translation of EU-ToxRisk case study approaches into the platform

The case study approach pursued in the EU-ToxRisk project provides a rich background of experience in trying out new methods on particular assessment questions. The commercialization effort takes the most promising methods and improves their standardized implementation toward a business setting. All business partners adhere to quality standards such as harmonized data integration, use of reproducible workflows and evidence-based approaches to safety assessment.

The launch of the EU-ToxRisk commercialization Partnership

A core group of partners (primarily SMEs) was formed to discuss the business case. These discussions culminated on 14-15 November 2020 in a “founding meeting” hosted at the Technology Park Basel in Switzerland. Each partner brings particular strengths and resources to the partnership and often may be a leader in their particular area of expertise. However, by joining forces, supported by common approaches to business processes, standards, data integration, knowledge management and marketing, partners anticipate being able to develop broader integrated service offerings together and co-execute adoption and growth.

The overall goal of the collaboration is to add value to existing solutions from the partners through joint integrated service development, marketing and sales, as well as to create new solutions and to facilitate the sustainability of approaches developed and tested in the project.
